Cascet Supermarket - Website Changes

This document shows all the changes that were made to the website. Each page has its own section, so it is easy to see what changed where. It also shows some of the mistakes in my coding that needed to be corrected. Which is not a lot for most of my errors where in my word document.

style.css

What it is

- A brand-new CSS file was created called style.css.
- This file is linked to all 5 pages, so all the styling comes from one place.
- Before this, all the pages had no real styling and just used basic inline colours.

Colours and fonts

- The main brand colour is red, which matches the original red header that was already there.
- Two Google Fonts were added - one bold font for headings and one clean font for normal text.
- All the colours, fonts and spacing are saved as variables at the top of the file, so they are easy to change later.

Header and nav bar

- The header background was changed to a red gradient, so it looks nicer instead of being flat red.
- The nav links were changed to look like pill shaped buttons that light up when you hover over them.
- The header sticks to the top of the screen when you scroll down.
- The logo has a white background behind it so it stands out on the red header.

Section headings

- All the h2 headings were changed to look like red angled banner tabs with white text.
- This is similar to how supermarkets like Checkers and Pick n Pay label their aisles.
- The headings have a darker red shadow underneath to make them look like they are lifted off the page.

Product cards

- Each product card has a white background, rounded corners and a light shadow.
- When you hover over a card it lifts up a little and gets a red border.
- A thin red line slides in along the bottom of the card when you hover over it.
- The price shows in a red badge with white text, like a price tag in a shop.
- The product name is bold and dark, so it is easy to read.

Category tiles on the homepage

- The category tiles are set up in a grid that adjusts how many columns it shows based on how wide the screen is.
- All 7 tiles have the same hover effects as the product cards.
- The category name turns red when you hover over the tile.

Contact page list items

- Each contact detail and operating hour is shown in a white box with a red stripe on the left side.

Delivery form

- The form sits inside a white card with rounded corners and a shadow.
- When you click on any input field it gets a red border so you can see which field you are busy with.
- The Clear buttons are small ghost buttons that turn red when hovered.
- The Submit button is full width and red, it lifts slightly when you hover over it.

Footer

- The footer has a very dark background with light grey text.
- The footer works even though the HTML file has a spelling mistake in the footer tag.

Responsive design

- On tablet screens the navigation wraps if needed, cards get a bit smaller and the map gets shorter.
- On mobile the category tiles switch to 2 columns, and product cards flip to horizontal rows with the image on the left.
- On large screens the tiles and cards get a bit bigger, and the banner image gets taller.

Homepage.html

CSS was linked

- The link to style.css was added into the head section so the page gets all the styling.

Products we offer section was fixed

- The closing ul tag was in the wrong place - it was sitting right after the Snacks item instead of at the end.
- Because of that only Vegetables and Snacks were inside the list, and Drinks, Stationery, Vape and Cigarettes, Ice Cream and Bakery were floating outside it.
- Those 5 items did not get the grid styling, so they looked different to the first two.
- The closing ul tag was moved to the very end after Bakery, so all 7 tiles are now inside the same list and look the same.

Product.html

CSS was linked

- The link to style.css was added into the head section so the page gets all the styling.

Missing head tag

- The original file was missing the closing head tag so the CSS link would not have worked properly without it being there.

How the page looks now

- All 7 product sections now show as styled card grids.
- Each card shows the price in a red badge, the product name in bold and any extra details underneath in smaller text.
- None of the product names, prices or images were changed, only the styling was applied.

About us.html

CSS was linked

- The link to style.css was added into the head section so the page gets all the styling.

How the page looks now

- The About Us and Get to Know Us headings show as the red banner tabs.
- The paragraph text has comfortable spacing and is easier to read.
- The banner image stretches across the full width of the content area.

Contact.html

CSS was linked

- The link to style.css was added into the head section so the page gets all the styling.

How the page looks now

- The Customer Care and Operating Hours headings show as the red banner tabs.
- Each list item for the email, phone number, address and operating hours shows as a white card with a red stripe on the left.
- The Google Maps embed has rounded corners and a shadow, so it fits in nicely with the rest of the page.

Delievery.html

CSS was linked

- The link to style.css was added into the head section so the page gets all the styling.

How the page looks now

- The whole form sits inside a white card with rounded corners and a shadow.
- All the labels show in small bold uppercase text above their input fields.
- All the text boxes, the phone number box and the building type dropdown look the same.
- When you click into a field it gets a red border and a soft red glow so you know which field you are on.
- Each Clear button is a small ghost button next to its field that turns red when you hover it.
- The Submit button goes across the full width of the form and lifts slightly when you hover over it.
- The styling also covers the Submit button even though it has a spelling mistake in the original HTML, so it still looks correct without the HTML needing to be changed.
