Cascet Supermarket - Website Changes

This document shows all the changes that were made to the website using JavaScript. Each page has its own section, so it is easy to see what changed where. It also explains the HTML changes that were needed to support the JavaScript, and which JavaScript features are active on each page.

script.js

What it is

- ☐ A brand-new external JavaScript file was created called script.js.
- ☐ This file is linked at the bottom of all 6 pages so all the JavaScript comes from one place.
- ☐ Before this, the pages had no JavaScript at all.
- ☐ The file is organised into separate functions, each one handling a single feature, and they all run once the page finishes loading.

Page fade-in

- ☐ When any page loads, the body starts invisible and fades in smoothly over 0.4 seconds.
- ☐ This makes the site feel smoother when switching between pages.

Scroll-reveal animations

- ☐ As the user scrolls down, each section of content fades up into view.
- ☐ This is done using the IntersectionObserver API so the animation only fires once per element.
- ☐ This satisfies the animations and transitions requirement.

Active navigation link

- ☐ The script checks which page is currently open and automatically bolds and underlines that nav link.
- ☐ This works on all 6 pages so the user always knows where they are.

Mobile hamburger menu

- ☐ On screens smaller than 640px the navigation links collapse behind a hamburger icon.
- ☐ Clicking the icon opens and closes the nav links with an animation.
- ☐ All the CSS for this is injected by the script itself so style.css did not need to be changed.

Gallery lightbox

- ☐ Every product image and category image on every page is clickable.
- ☐ Clicking an image opens it enlarged in a full-screen overlay with a caption built from the product name and price text.
- ☐ Previous and next buttons let the user browse through all images without closing the lightbox.

- ☐ The keyboard arrow keys move between images and Escape closes the lightbox.
- ☐ This satisfies the gallery lightbox requirement.

Interactive maps

- ☐ On Contact.html the static Google Maps iframe is replaced at runtime with a real interactive Leaflet.js map.
- ☐ The Leaflet library is loaded from a CDN only when the Contact page is visited.
- ☐ The map shows a custom red pin on the store's real location with a popup showing the store name and address.
- ☐ This satisfies the interactive maps requirement.

Accordion for operating hours

- ☐ The operating hours list on Contact.html is wrapped in a collapsible accordion by the script.
- ☐ A button appears that expands or collapses the list with a smooth animation.
- ☐ The original list content was not changed, only moved into the accordion at runtime.

Back-to-top button

- ☐ A floating red button appears in the bottom right corner of every page when the user scrolls down more than 400 pixels.
- ☐ Clicking it scrolls smoothly back to the top of the page.

Homepage.html

Script was linked

- ☐ The script tag linking script.js was added just before the closing body tag so the page loads the JavaScript.

SEO meta tags were added

- ☐ The page title was changed from "Home" to "Home | Cascet Supermarket - Brackendowns, Alberton".
- ☐ A meta description tag was added describing the store and what it sells.
- ☐ A meta keywords tag was added with search terms relevant to the page.
- ☐ A meta charset and viewport tag were added for correct encoding and mobile display.
- ☐ None of these existed on the page before.

Alt text was added to all images

- ☐ Every image on this page was missing an alt attribute.
- ☐ Descriptive alt text was added to every image, for example "Fresh vegetables category" and "Cascet Supermarket store banner".
- ☐ This satisfies the SEO image optimisation requirement.

Enquiry nav link was added

- ☐ A sixth navigation link was added pointing to the new Enquiry.html page.
- ☐ This was added on every page so the site navigation stays consistent.

Footer stray tag was fixed

- ☐ The original footer had a misplaced closing body tag inside the footer text.
- ☐ This was corrected so the page structure is valid and the script tag at the bottom can run properly.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays on the category tiles as the user scrolls.
- ☐ The Home nav link is highlighted as the active page.
- ☐ Mobile hamburger menu shows on small screens.
- ☐ Clicking any category image or the banner opens the lightbox.
- ☐ Back-to-top button appears after scrolling down.

Product.html

Script was linked

- ☐ The script tag linking script.js was added just before the closing body tag.

SEO meta tags were added

- ☐ The page title was changed from "Product" to "Our Products | Cascet Supermarket".
- ☐ A meta description, keywords, charset and viewport tag were added.

Alt text was added to all images

- ☐ None of the 77 product images had alt text.
- ☐ Descriptive alt text was generated from the actual product name and description next to each image in the card.
- ☐ For example the image file named black.png was given the alt text "Doritos Grilled Barabque" rather than just the filename, because the product name text was already in the card.

Enquiry nav link was added

- ☐ A sixth navigation link pointing to Enquiry.html was added to the nav bar.

Tonic and Milk products were fixed

- ☐ The Tonic 1L and Milk 2L product cards were not wrapped in a flex row div like every other product row.
- ☐ Because of this they were stacking on top of each other instead of sitting side by side like the rest of the drinks.
- ☐ A flex row div was added around them so they match the format of every other product row.

Live product search and filter was added

- ☐ A search bar is injected at the top of the page above the first category heading.
- ☐ As the user types, every product card is checked against the search text and non-matching cards are hidden instantly without a page reload.
- ☐ If an entire category has no matching products, the category heading is also hidden so there are no empty sections.
- ☐ A live counter shows "Showing X of Y products" while a search term is active.
- ☐ This satisfies the dynamic content and search feature requirement.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays on product rows as the user scrolls.
- ☐ The Product nav link is highlighted as the active page.
- ☐ Mobile hamburger menu shows on small screens.

- ☐ Clicking any product image opens the lightbox with the product name and price as a caption.
- ☐ The search bar filters products live as the user types.
- ☐ Back-to-top button appears after scrolling down.

About us.html

Script was linked

- ☐ The script tag linking script.js was added just before the closing body tag.

SEO meta tags were added

- ☐ The page title was changed from "About us" to "About Us | Cascet Supermarket".
- ☐ A meta description, keywords, charset and viewport tag were added.

Alt text was added to all images

- ☐ The logo image was given the alt text "Cascet Supermarket logo".
- ☐ The storefront banner was given the alt text "Cascet Supermarket storefront".

Enquiry nav link was added

- ☐ A sixth navigation link pointing to Enquiry.html was added to the nav bar.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays on the heading and paragraph text.
- ☐ The About Us nav link is highlighted as the active page.
- ☐ Mobile hamburger menu shows on small screens.
- ☐ Clicking the storefront image or logo opens the lightbox.
- ☐ Back-to-top button appears after scrolling down.

Contact.html

Script was linked

- ☐ The script tag linking script.js was added just before the closing body tag.

SEO meta tags were added

- ☐ The page title was changed from "Contact us" to "Contact Us | Cascet Supermarket".
- ☐ A meta description, keywords, charset and viewport tag were added.

Alt text was added to all images

- ☐ The logo image was given the alt text "Cascet Supermarket logo".

Enquiry nav link was added

- ☐ A sixth navigation link pointing to Enquiry.html was added to the nav bar.

Send us a message form was added

- ☐ The original Contact.html had no form at all, only a list of contact details and a map.
- ☐ A general contact form was added below the operating hours section.
- ☐ The form collects full name, email address, phone number, message type from a dropdown, and the message itself.
- ☐ When the user submits, all fields are validated and then the user's email app opens with the message pre-filled and addressed to cascet.supermarket@gmail.com.
- ☐ An on-page confirmation is also shown immediately so the user has feedback.
- ☐ This satisfies the contact form controls, contact validation and contact process email requirements.

Interactive Leaflet map was added

- ☐ The static Google Maps iframe was replaced at runtime with an interactive Leaflet.js map.
- ☐ The map shows a custom red pin at the store's real location with a popup showing the name and address.
- ☐ This satisfies the interactive maps requirement.

Operating hours accordion was added

- ☐ The operating hours list was wrapped in a collapsible accordion by the script.
- ☐ The original list content was not changed.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays as the user scrolls.
- ☐ The Contact nav link is highlighted as the active page.

- ☐ Mobile hamburger menu shows on small screens.
- ☐ The static map iframe is replaced by a live interactive Leaflet map.
- ☐ The operating hours collapse and expand via the accordion button.
- ☐ The contact form validates all fields and opens the email app on submit.
- ☐ Back-to-top button appears after scrolling down.

Delievery.html

Script was linked

- ☐ The script tag linking script.js was added just before the closing body tag.

SEO meta tags were added

- ☐ The page title was changed from "Delievery" to "Delivery | Cascet Supermarket".
- ☐ A meta description, keywords, charset and viewport tag were added.

Alt text was added to all images

- ☐ The logo image was given the alt text "Cascet Supermarket logo".

Enquiry nav link was added

- ☐ A sixth navigation link pointing to Enquiry.html was added to the nav bar.

Delivery form validation was added

- ☐ Every field in the existing delivery form is now validated by JavaScript before the form can be submitted.
- ☐ Full Name must contain only letters and be at least 2 characters long.
- ☐ ID Number must be exactly 13 digits.
- ☐ Phone Number must match a valid South African mobile number format such as 0821234567.
- ☐ City and Street Address must be filled in.
- ☐ Postal Code must be exactly 4 digits.
- ☐ Card Number must be exactly 16 digits.
- ☐ Building Type must have an option selected from the dropdown.
- ☐ Each field turns red with an error message below it if the input is wrong and turns green once corrected.
- ☐ Feedback is given live as the user types or moves between fields.
- ☐ This satisfies the delivery form controls, form validation and client-side validation requirements.

Success modal was added

- ☐ When all fields pass validation and the user clicks Submit, a confirmation popup appears saying the order has been placed.
- ☐ This replaces the form trying to submit to the non-existent submit_form.php backend.
- ☐ The original spelling mistake in the Submit button was left unchanged and the JavaScript was written to match it exactly.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays on the form.

- ☐ The Delievery nav link is highlighted as the active page.
- ☐ Mobile hamburger menu shows on small screens.
- ☐ All form fields are validated live with red error messages and green success states.
- ☐ A success popup appears when the form is submitted correctly.
- ☐ Back-to-top button appears after scrolling down.

Enquiry.html

What it is

- ☐ Enquiry.html is a brand-new page that did not exist in the original website.
- ☐ It was created to provide a dedicated product enquiry form, separate from the general contact form on Contact.html.
- ☐ The page uses the same header, navigation and footer structure as every other page so it looks consistent.
- ☐ A sixth nav link pointing to this page was added on all six pages of the site.

SEO meta tags were added

- ☐ The page title is "Product Enquiry | Cascet Supermarket".
- ☐ A meta description, keywords, charset and viewport tag were added.

Product enquiry form

- ☐ The form collects full name, email address, phone number, product category from a dropdown, product name, quantity needed and optional additional details.
- ☐ All required fields are validated before the form submits.
- ☐ Email must match a valid format.
- ☐ Phone number must match a valid South African mobile number format.
- ☐ Quantity must be at least 1.
- ☐ Fields turn red with error messages when wrong and green when corrected.
- ☐ This satisfies the enquiry form controls and enquiry validation requirements.

Dynamic response after submission

- ☐ When the form is valid and submitted, the script searches a built-in catalogue of all 77 products from Product.html.
- ☐ If the product is found, the user sees the price, the quantity they asked for and an estimated total cost, with a prompt to call or visit the store to confirm availability.
- ☐ If the product is not found, the user is told the team will check stock and contact them using the details they provided.
- ☐ This satisfies the enquiry process response requirement that the form should present the user with a response related to cost, availability or another relevant aspect.

How the page looks now

- ☐ Page fade-in animation runs on load.
- ☐ Scroll-reveal animation plays on the form.
- ☐ The Enquiry nav link is highlighted as the active page.
- ☐ Mobile hamburger menu shows on small screens.
- ☐ All form fields are validated live.

- ☐ A dynamic response appears below the form after a successful submission.
- ☐ Back-to-top button appears after scrolling down.
